

Lyme on the Brain

Lecture Tuesday April 13th

7:00 PM

Hosanna Lutheran Church
Forrest Lake

This is a pathology based slide show explaining the Lyme bacterium's ability to enter the human brain, and the consequences of Chronic Neurological Lyme Disease.

This is an actual autopsy photo from a Wisconsin patient who had received antibiotics, but had living Lyme bacteria in his brain despite treatment.

(Image below is the Lyme spirochete)

This is not a bacterium you want in your brain !

Lecturer: Thomas Grier 218-728-3914
Executive Director MIBDEC
