

Minnesota Lyme Action Support Group Invites you to attend

“Preparing for Tick Season”

With tick season around the corner, knowing what to do to prevent tick bites is important not only for humans but also our pets. We will have 3 speakers who will cover insecticides that will repel and kill ticks, how to remove a tick properly and how to protect our animals from tick bites and recognize symptoms that may indicate Lyme or a tick born illness.

Knowledge is power, so be informed and join us for the following speakers;

- **Dr. Betty Maloney** a family practice physician from Forest Lake will discuss the proper removal of ticks and the appropriate medical care for a tick bite.
- **Brian Weekley** from Bugg Products, the Minnesota-based manufacturer of Buggspray Insect Repellent and BuggSlayer Insecticide, will discuss the value of personal insect repellents and insecticides for your yard that repel and kill ticks.
- **Dr. Jeff Johnson, DVM**, from Blue Sky Animal Hospital in Wyoming, MN, will discuss tick prevention, the value of vaccines, tick born symptoms to be alert to in your pets, and treatment guidelines.
